

# LET-LOK<sup>®</sup>

## TUBE FITTINGS

1/16" Through 1 1/2"-inch  
2 mm Through 25 mm-Metric

## LET-LOK® DESCRIPTION

The HAM-LET® GROUP has produced high quality tube and pipe fittings in various materials for high pressure applications since its establishment in 1950.

For almost five decades, through tremendous efforts in research and development, HAM-LET® has gained an excellent reputation as a leading manufacturer of high pressure instrumentation products.

The LET-LOK® range of connectors has been developed to fill the rapidly increasing demand for tube fittings suitable for high pressure use in environments such as petrochemical, fluid, power, nuclear, electronic, as well as other major industries.

LET-LOK® tube fittings have been carefully manufactured and tested to withstand the demands of high performance tube fittings, such as high pressure, impulse, vibration, vacuum and temperature.

These tube fittings are manufactured to exacting tolerances using the most modern and advanced computerized automation. One of the main conditions required to producing these precision machined fittings is the maintenance of stringent quality control in conjunction with skilled craftsmen.

## LET-LOK® HOW DOES IT WORK ?

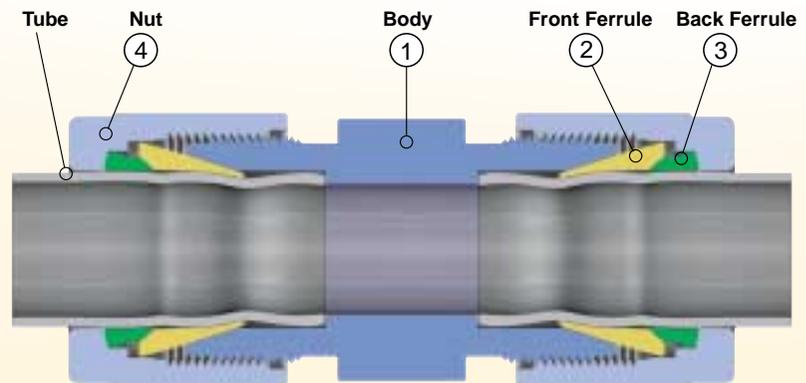

The LET-LOK® tube fitting is a mechanism used for both sealing and gripping tubing. The mechanical advantage and geometry of fitting produces a leak-tight assembly.

To assemble, simply insert the tube into the complete assembly until the tube bottoms-out against the shoulder of the fitting body.

The two ferrules are driven forward between the nut and fitting body using the mechanical force created by rotating the nut clockwise. The back ferrule (3)

is driven against the tapered rear of the front ferrule (2) and the front ferrule is driven by force into the tapered mouth of the body.

The rear ferrule is swaged radially inwards on the tube while lifting the front ferrule out to form a full faced seal on the tapered surface of the body. The 1¼ turn on the nut from the hand tight position assures consistent drive of the sealing members. This ensures an effective seal against high pressure as well as ultra high vacuum conditions.

LET-LOK® tube fittings are composed of four parts:  
**1. body 2. front ferrule 3. back ferrule 4. nut.**

## LET-LOK® INSTALLATION INSTRUCTIONS

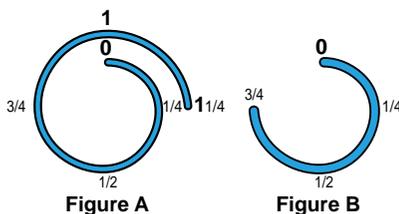

LET-LOK® fittings are supplied assembled, finger tight. Disassembly before use can allow the entry of dirt or other particles.

Insert the tubing into the LET-LOK® fitting. Check that the tube rests firmly on the fitting shoulder and that the nut is finger tight. At this point it is recommended that a scribe mark be drawn on the hex of the nut extending onto the fitting body. This mark will serve as an indicator for the starting point and proper pull-up.

Tighten the nut. (see Fig. A & B) 1 1/4 turns of the nut are required for 1/4" (6 mm) and higher. 3/4 turn of the nut is required for 3/16" (4 mm) and lower.

### Warning

Do not hold the tube in a vise in the place where it will be inserted into the fitting (the vise will leave a mark on the tube that may cause leaks, and might cause ovality).

### REASSEMBLY INSTRUCTIONS

LET-LOK® connections may be disconnected and remade repeatedly, without loss of leaktight seal.

1. Before disconnecting, mark the position of the nut in relation to the fitting body.
2. To reassemble, use a wrench to tighten nut to original position.
3. Tighten slightly with wrench until a slight rise in torque is felt.

### TUBE CUTTING

Two different methods can be used to cut tubes:

1. Tube cutter
2. Hacksaw

### TUBE CUTTER

To attain a leak free connection, the tubing must be cut squarely. A good quality tube cutter with the appropriate blade for the tubing material is recommended.

Do not try to reduce the time of cutting by taking deep cuts with each turn of the cutter. This will work harden the tube.

The end of the tube must be deburred to avoid damage to the fitting and to ensure that the tube reaches the bottom of the fitting.

### HACKSAW CUTTING

In order to cut the tube with a hacksaw and get square ends, the tube must be cut with guide blocks.

This method of cutting necessitates deburring of the tube ends.

### TUBE HANDLING

Scratches on the tube might cause leaks. It is, therefore, important to handle the tube carefully to reduce the risk of leaks.

### SOME PRECAUTIONS TO BE TAKEN:

1. Tubes must not be dragged on the floor.
2. Tubes must not be dragged out of a tubing rack, especially in case of large OD tubes.

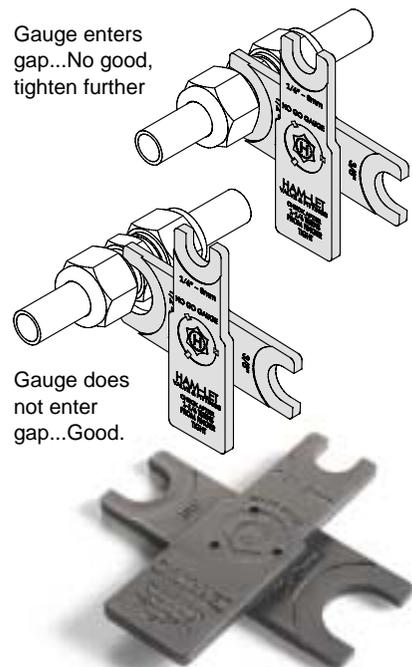

### COPPER TUBING

If using copper tubing from a roll, hold the end of the tube and roll the roll outwards allowing the tubing to lie on a flat surface.

### INSPECTION GAUGE

**Use: This is a "No-Go" gauge and should be used as follows:**

1. Make up the fitting according to the following instructions: 1/4 inch (6mm), 3/8 inch, 1/2 inch (12mm) - make up 1.1/4 turns from finger tight.
2. Check gap between nut and body, using the appropriate sized gauge. If the gauge slides easily into the gap, tighten the nut further until gauge can not enter the gap.

**To order, use part No. 3900098**

**Available only in:**

1/4 inch (6mm), 3/8 inch,  
1/2 inch (12mm) - make up 1.1/4

## LET-LOK® PHYSICAL DIFFERENCES AND MARKING

### LET-LOK® METRIC FITTINGS:

Tee & Elbow (see Fig. 1),

Body marked: MM

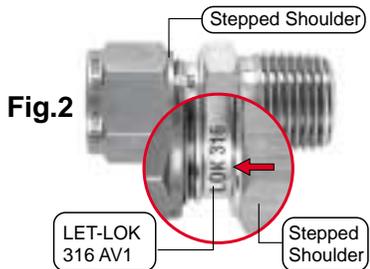

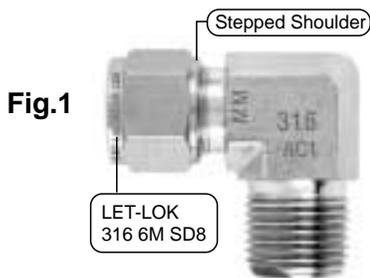

Straight Connectors (see Fig. 2)

Body: Stepped shoulder,

Marked: LET-LOK 316 AV1<sup>(2)</sup>

Nut: (see Figs.1 & 2) Stepped shoulder

Shoulder marked LET-LOK 316 6M<sup>(1)</sup> SD8<sup>(2)</sup>

### LET-LOK® INCH FITTINGS:

Tee & Elbow (See Fig. 3)

Straight Fittings, (see Fig. 4)

Body: Shoulder marked:

LET-LOK 316 AV2<sup>(2)</sup>

Nut (See Fig. 3 & 4): Shoulder marked

LET-LOK 316 1/2<sup>(1)</sup> BU2<sup>(2)</sup>

<sup>(1)</sup> Tube O.D. <sup>(2)</sup> Material Batch

## LET-LOK® HIGH SAFETY

In applications where severe conditions and high pressure exist, we recommend the following installation procedures:

1. Check that the nut is finger tight.
2. Insert the tube (up to the shoulder).
3. Rotate the nut with a wrench until the tube does not rotate freely.
4. Mark position of the nut.
5. Rotate the nut 1<sup>1</sup>/<sub>4</sub> turns.

This method ensures that even if the tube O.D. is at the minimum tolerance, the ferrules will be in contact with the tube for the full 1<sup>1</sup>/<sub>4</sub> rotation.

## TUBING DATA FOR LET-LOK® FITTINGS

In order to assure maximum fitting reliability and performance, great care should be given when selecting the tubing for each application.

### TUBE SELECTION:

Four variables must be considered when ordering tube for use with LET-LOK® fittings:

1. Material
2. Tube wall thickness
3. Tube surface finish
4. Tube hardness

Tubing should comply with standard ASTM A213 or ASTM A269, be seamless, and fully annealed.

The tube must be free of scratches and suitable for bending and flaring.

### TUBE OD TOLERANCES:

$$\left. \begin{array}{l} 1/16" - 1/8 \\ 2\text{mm} - 3\text{mm} \end{array} \right\} \pm 0.003"$$

$$\left. \begin{array}{l} 3/16" - 1-1/4" \\ 4\text{mm} - 25\text{mm} \end{array} \right\} \pm 0.005"$$

$$1-1/2" \left. \right\} \pm 0.01"$$

Ovality of twice OD tolerance is not suitable for LET-LOK fittings. The tube must be reasonably round. The ends of the tube must be free of burrs.

Tubing hardness: The hardness of the tube must be lower than the hardness of the fitting material. The hardness must be not more than Rockwell HRB 80.

## LET-LOK® TUBING DATA

**Table 1: STAINLESS STEEL TUBING WALL THICKNESS OF TUBE IN INCH**

Annealed 304 or 316 stainless steel tubing complying with ASTM A213, A269 or equivalent specifications. Based on ultimate tensile strength of 75,000 psi (5167 bar). For metal temp. from -20°F - 100°F (-29°C - 37°C).

Suggested ordering information: Fully annealed high quality (Type 304 or 316) stainless steel hydraulic tubing ASTM A269 or A213 or equivalent, seamless or welded and drawn with a hardness of Rb80 or less. Tubing should be without scratches and suitable for flaring and bending.

Tubing O.D.		.010	.012	.014	.016	.020	.028	.035	.049	.065	.083	.095	0.109	0.120	0.134	0.156	0.188

	1-1/2"											2300	2700	3000	3400	4000	4900

Working pressure (psig) for seamless tubing.  
 Multiply pressure rating by .80 for single welded tubing.  
 Multiply pressure rating by .85 for double welded tubing.

**Table 2: COPPER TUBING WALL THICKNESS OF TUBE IN INCH**

Annealed copper seamless tubing complying with ASTM B68 and ASTM B75 specifice in temper designation 060. Based on ultimate tensile strength 30,000 psi (2067 bar). For metal temperatures from -20°F to 100° F (-29°C to 37°C). Suggested ordering information: High quality soft annealed seamless copper tubing ASTM B75 or equivalent.

25	1			500	700	900	1100	1300	1500

**Table 3: Factors used to determine allowable pressure at higher temperatures**

To determine allowable pressure at higher temperatures, multiply allowable working pressure from Tables 1 & 2 by factor shown in Table 3.

For example: The allowable pressure for Type 316 stainless steel, size 1/2" OD x .049" wall at 800°F(427°C) would be equivalent to 3750 psi x 0.79 = 2962.5 psi.

°F	°C	A.I.S.I. 316	Copper
200	93	1	0.80
400	204	0.96	0.50
600	316	0.85	-
800	427	0.79	-
1000	538	0.76	-
1200	649	0.37	-

**Table 4: Gas Application Tubing INCH**

Gases are characterized by small molecules which can escape through the smallest leak path. For gas applications, It is therefore recommended for gas applications to select tubing with greater wall thickness. Table 4 shows the recommended wall thicknesses for greater safety and efficiency.

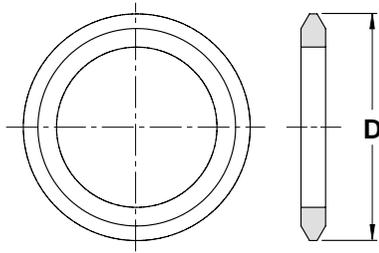

Tubing O.D.	Min. Nominal Wall Thickness
1/8"	0.028"
3/16"	0.028"
1/4"	0.028"
5/16"	0.035"
3/8"	0.035"
1/2"	0.049"
5/8"	0.065"
3/4"	0.065"
7/8"	0.083"
1"	0.083"

**METRIC**

Tubing O.D.	Min. Nominal Wall Thickness
3 mm	0.8 mm
6 mm	0.8 mm
8 mm	1.0 mm
10 mm	1.0 mm
12 mm	1.0 mm
14 mm	1.2 mm
16 mm	1.5 mm
18 mm	1.5 mm
20 mm	1.8 mm
22 mm	2.0 mm
25 mm	2.2 mm

**Warning! For Your Safety** The system designer and user have the sole responsibility to select products suitable for their special application requirements to ensure the proper installation, operation and maintenance of the product. Application details, material compatibility and product ratings should all be considered in the individual selection. Improper selection or use of products can cause property damage or personal injury.

## LET-LOK® STOP COLLAR

LET-LOK		D	
Inch	Inch	mm	
1/4	0.69	17.5	
3/8	0.84	20.6	
1/2	1.10	27.0	
3/4	1.31	33.3	
1	1.68	42.7	

- Assembly Instructions - Stop Collar**
1. Remove nut and ferrules from fitting.
  2. Insert stop collar.
  3. Assemble nut and ferrules - until finger tight.
  4. Make up the fitting until stop collar no longer rotates (feel with finger). At this stage it is guaranteed that the fitting is made up correctly.

### HOW TO ORDER: Assembled Stop Collar (with fitting)

## INSTALLATION INSTRUCTION FOR LET-LOK® FITTINGS 1 1/4" - 1 1/2"

1. Close the nut and ferrules on the tube with hydraulic tool.
2. Open and release from the tool.
3. Apply the G-Rapid paste on areas **A** and **B**.
4. Tighten the nut on body 1/2 a turn with a wrench

To order, use part No. 3900098

## HOW TO ORDER

ASSEMBLY INSTRUCTIONS

Reducing port connector 767LM

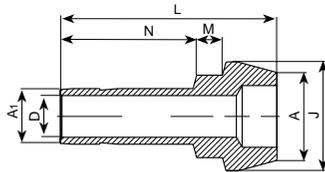

Reducer tube to stub 767 LT

\* Supplied assembled on tube stub end (A1) Nut+Front & Back Ferrule. Tighten the Nut on body 1/2 a turn with wrench. low friction paste, See page 5.  
 "D" - Dimension is minimum opening.  
 Dimensions are for reference only, and are subject to change without notice.

**Reference Specifications: Normen:**

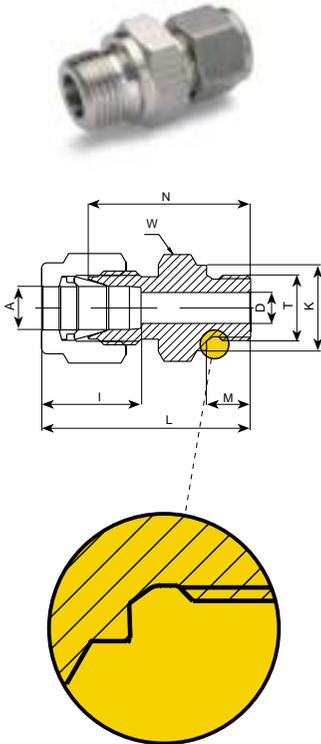

- 60° Thread angle
- Pitch measured in inches
- Truncation of root and crest are flat
- Taper angle 1° 47'

American Standard Pipe Thread (NPT). NPT (National Pipe Tapered) is made to specifications outlined in ASNI B1.20.1

"D" - Dimension is minimum opening.  
Dimensions are for reference only, and are subject to change without notice.

### INSTALLATION INSTRUCTIONS:

Figure 1  
Locking backed off

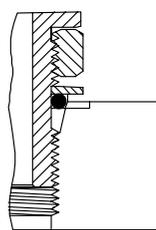

Lubricate O-ring by inserting it in the groove adjacent to the face of the metal back-up washer which is assembled at the extreme end of the groove as shown in figure 1.

Figure 2  
Fitting install hand tight

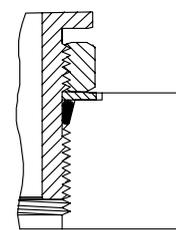

Install the fitting into the S.A.E. straight thread boss, figure 2, until the metal back-up washer contacts the face of the boss as shown in figure 2.

Figure 3  
Fittings backed - off for alignment (1 turn maximum)

Position the fitting by turning the counter clockwise up to maximum of one turn (see figure 3).

Figure 4  
Fitting locknut tight to appropriate torque

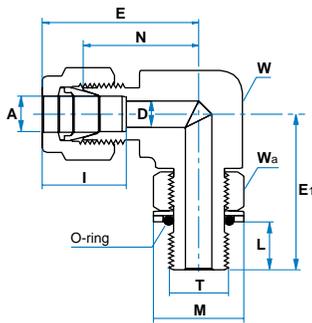

Holding the pad of the the fitting with a spanner, tighten the locknut and washer against the face as shown in figure 4.

\* Per B.S. 2779

\*\* O-rings used are Viton 90 Durometer. Other O-ring materials are available on request. For more technical information see page 48.

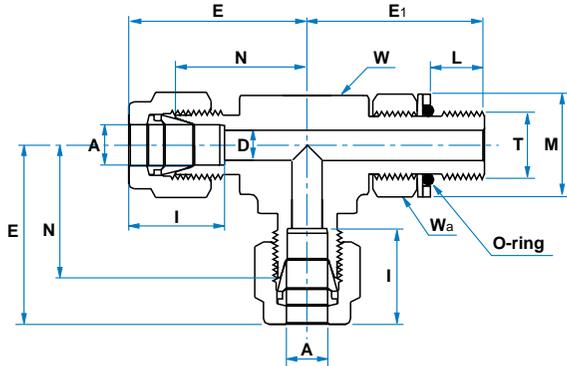

Dimensions are for reference only, and are subject to change without notice.

## ISO PARALLEL THREAD PER B.S. 2779

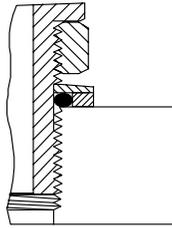

### INSTALLATION INSTRUCTIONS

Figure 1  
Locking backed off

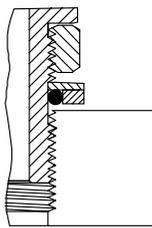

Lubricate O-ring by installing it in the groove adjacent to the face of the metal back-up washer which is assembled at the extreme end of the groove as shown in figure 1.

Figure 2  
Fitting install hand tight

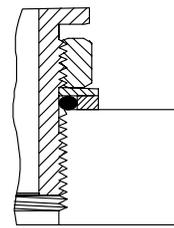

Install the fitting into the straight thread boss, figure 2, until the metal back-up washer contacts the face of the boss as shown in figure 2.

Figure 3  
Fittings backed - off for alignment (1 turn maximum)

Position the fitting by turning counter clockwise up to maximum of one turn. see figure 3.

Figure 4  
Fitting locknut tight to appropriate torque

Holding the pad of the the fitting with a wrench, tighten the locknut and washer against the face as shown in figure 4.

# ONE-LOK

TUBE FITTINGS 1/16 Through 1 in.

## THE PRINCIPLE

ONE-LOK is designed to give you leak-proof, secure connections that can withstand high pressure, vibration and vacuum applications. To this end, ONE-LOK tube fittings are made up of three parts that are precision engineered and machined: body, ferrule and nut.

## APPLICATIONS

Ham-Let's ONE-LOK tube fitting is designed for use in control systems, process and instrumentation devices and in industrial

equipment used in various industries such as:

- Pulp & paper mills
- Petroleum process plants
- Chemical process plants
- Chromatography
- Power generation plants

ONE-LOK offers you a simple, high quality tube fitting with excellent performance and reliability.

## MATERIALS

Ham-Let's ONE-LOK standard single ferrule fittings are offered

in 316 Stainless Steel. Cold drawn finished bar stock is machined to produce the straight fittings. Close grain forgings are used for the machining of the shaped bodies. For other material options, please contact your Ham-Let distributor or

Ham-Let On-line : [www.ham-let.com](http://www.ham-let.com)

## REMAKEABILITY

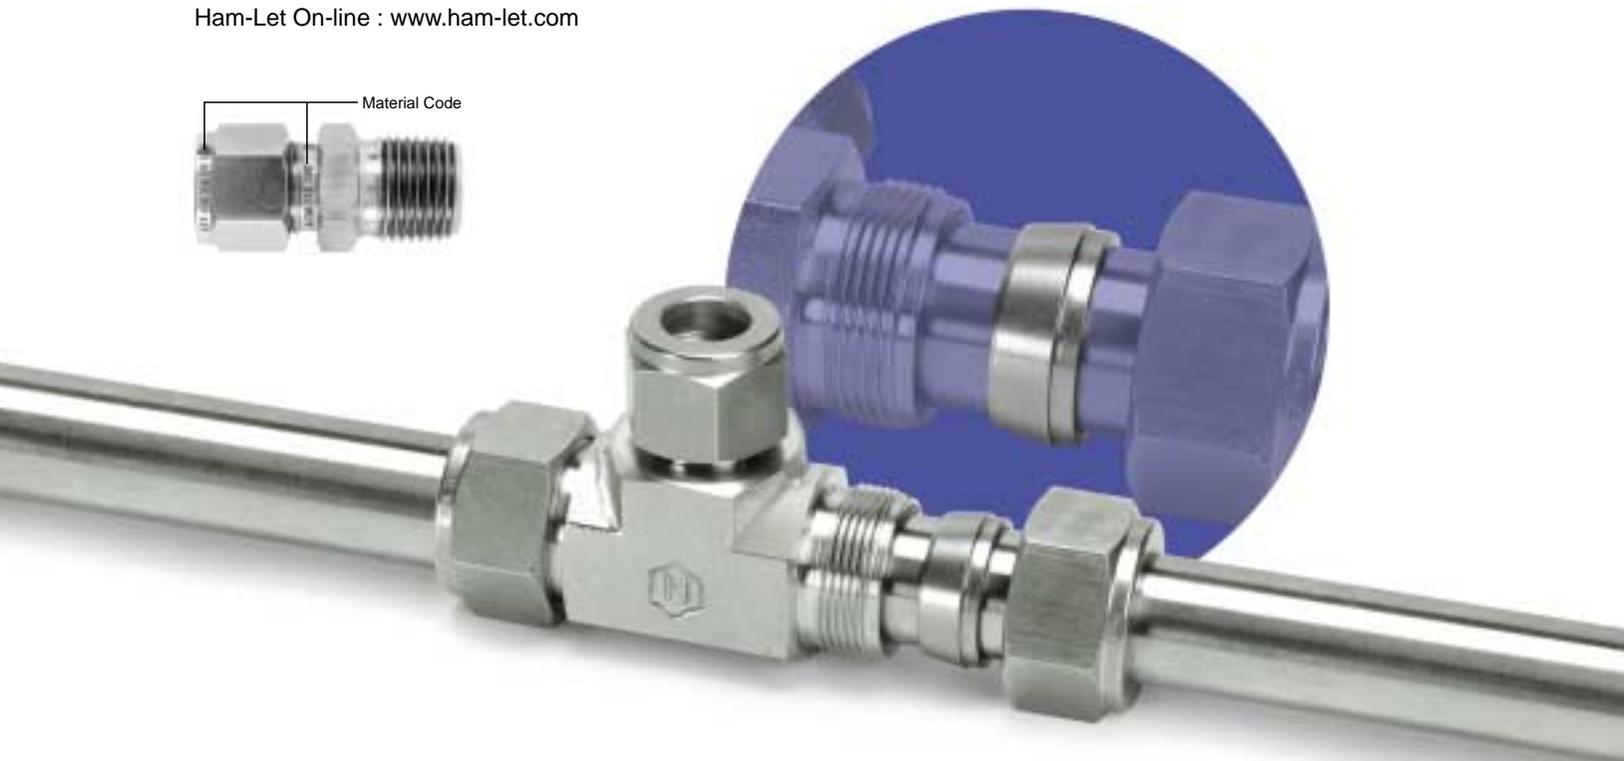

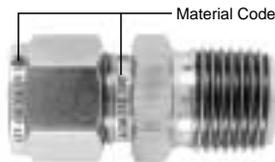

Thanks to the single ferrule design, Ham-Let's ONE-LOK tube fitting continues to perform through repeated remakes; the ONE-LOK single ferrule seal is leak tight - remake after remake.

## TEMPERATURE CHANGES

During make-up, the ONE-LOK single ferrule is designed to be able to bow. This action introduces a 'live' element, allowing the device to maintain a leak-tight seal despite expansion and contraction due to temperature changes.

## UNIQUE HEAT CODE TRACE NUMBER (MATERIAL CODE)

Ham-Let stamps or etches all ONE-LOK stainless steel body fittings with a unique heat code trace number. This is particularly valuable for critical applications. Full documentation can be made available via this code to trace the SS material back to the original melt or cast.

## ONE-LOK TUBING SELECTION

To ensure the installation of safe, leak free systems, it is important to choose the appropriate ONE-LOK single ferrule for your application. ONE-LOK fittings are engineered to the highest standards.

The table below lists tube sizes, which have been tested to bursting pressure with both maximum and minimum wall thickness. Correctly assembled ONE-LOK fittings were installed and no leaks or other failures were noted at the connection points. If you are planning on using tubing that has different wall thicknesses than those noted in this chart, please contact

the Ham-Let Technical Department for advice regarding the appropriate working pressure.

Note: Use fully annealed high quality stainless steel tubing of ASTM A269 or equivalent standard.

Working pressure: Based on laboratory and field tests using ASTM A269 tubing with a safety factor of 4:1 in a metal temperature range of -20° to +100°c.

However, it is the customer's responsibility to ensure safe product selection that is based upon the total system design and function.

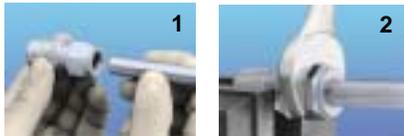

### TUBING DATA:

Annealed 304 or 316 stainless steel tubing meeting ASTM A213, A269 or equivalent specifications, based on ultimate tensile strength of 75,000 psi (5167 bar), for metal temperatures from -20°F - 100°F (-29°C - 37°C).

Suggested ordering information: Fully annealed high quality (Type 304 or 316) stainless steel hydraulic tubing ASTM A269 or A213 or equivalent, seamless or welded and drawn with a hardness of Rb90 or less. Tubing should be without scratches and suitable for flaring and bending.

Tubing O.D.		WALL THICKNESS OF TUBE IN INCH

25	1"									2400	3100	3600	4200	4700

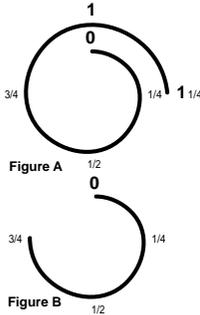

## INSTALLATION INSTRUCTIONS

ONE-LOK fittings are supplied assembled, finger tight.

Disassembly before use can allow the entry of dirt or other particles.

1. Insert the tubing into the ONE-LOK fitting. Check that the tube rests firmly on the fitting shoulder and that the nut is finger tight.

2. Tighten the nut. 1 1/4 turns of the nut is required for 1/4" (6 mm) and higher (See Figure A). 3/4 turns of the nut is required for 1/8" (See Figure B).

### REASSEMBLY INSTRUCTIONS

ONE-LOK connections may be disconnected and remade repeatedly, without loss of leaktight seal.

1. Before disconnecting, mark the position of the nut in relation to the fitting body.
2. To reassemble, use a wrench to tighten nut to original position.
3. Tighten slightly with wrench until a slight rise in torque is felt.

### TUBE CUTTING

Two different methods can be used to cut tubes

1. Tube cutter
2. Hacksaw

### TUBE CUTTER

To attain a leak free connection, the tubing must be cut squarely. A good quality tube cutter with the appropriate blade for the tubing material is recommended.

Do not try to reduce the time of cutting by taking deep cuts with each turn of the cutter. This will work harden the tube.

The end of the tube must be deburred to avoid damage to the fitting and to ensure that the tube reaches the bottom of the fitting.

### HACKSAW CUTTING

In order to cut the tube with a hacksaw and get square ends, the tube must be cut with guide blocks. This method of cutting necessitates deburring of the tube ends.

#### Warning

Do not hold the tube in a vise in the place where it will be inserted into the fitting (the vise will leave a mark on the tube that may cause leaks, and might cause ovality).

### TUBE HANDLING

Scratches on the tube might cause leaks. It is therefore, important to handle the tube carefully to reduce the risk of leaks.

#### Some precautions to be taken:

1. Tubes must not be dragged on the floor.
2. Tubes must not be dragged out of a tubing rack, especially in case of large OD tubes.

## How to Order:

ONE-LOK fitting part numbers are constructed from symbols that identify the type of material and size of the fitting.

EXAMPLE:

768HL

Fitting type  
(male connector)

## HAM-LET PRECISION INSTRUMENT PIPE FITTINGS

The HAM-LET Group Ltd.  
is pleased to introduce our  
line of Precision Instrument Pipe  
Fittings.

The Pipeline range of connectors is manufactured for typical applications in chemical and petrochemical processing plants, as well as oil, gas and power generation industries. This fully illustrated catalog contains detailed engineering information, dimensional data and part numbering system.

## PIPE LINE® DESCRIPTION

The HAM-LET® Group Ltd. is pleased to introduce our line of Precision Instrument Pipe Fittings.

The Pipeline range of connectors is manufactured for typical applications in chemical and petrochemical processing plants, as well as oil, gas and power generation industries. This fully illustrated catalog contains detailed engineering information, dimensional data and part numbering system.

## PIPE LINE® INSTALLATION INSTRUCTION

To ensure a leak tight seal, HAM-LET® recommends the use of a pipe thread sealant on all NPT threads. The most effective sealing method is teflon tape. Tape should be used only on male tapered pipe threads.

### Do not use tape on flared, coned or tube fitting ends!

Clean both male and female tapered threads. Wrap tape in the direction of the male tapered thread spiral.

**Note:** Two wraps are suggested for stainless steel tapered pipe threads. Make sure tape does not overhang the first thread as the tape might shred and enter the fluid system. Cut off excess tape. The connection is now ready for proper makeup.

## PIPE LINE® FEATURES

- Sizes range from 1/8" to 1".
- Fittings are properly packaged with the exposed threads protected to ensure they are not damaged during delivery.
- All pipe threads meet the requirements of **ASME/ANSI B1.20.1** (1983) for tapered pipe threads (NPT).
- Working pressures calculated in accordance with Power Piping Code **ANSI B 31.1**, Refiner Piping Code **ASME/ANSI B 31.3** and section VIII of **ASME** Boiler & Pressure Vessel Code.

# *37° Flare*

3 PIECE TUBE ASSEMBLY

**Stainless Steel High Pressure 37° Flared  
Tube Fittings 1/8" to 1 1/2"**

## MEETS SAE STANDARD J514

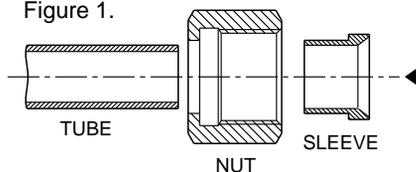

If required, see SAE Standard J514 for a complete list of dimensions. NPT Tapered Pipe Threads meet the requirements of ASME/ANSI B.1.20.1.

**All 37° Flared tube fittings-3 piece tube assembly, can be used with metric tube by using a metric 37° sleeve, instead of an inch sleeve. Each dimension table shows which metric sleeve should be used for every size.**

### ASSEMBLY INSTRUCTION

1. Cut the tube to the proper length.
2. Slide the nut and sleeve onto the tube. (See Fig.1)
3. With a special flaring tool, form the flare to 37° dimension according to SAE STD. J533. (see page 3)
4. Screw the nut onto the body until finger tight.
5. From this position, tighten the nut with a wrench 1/4" turn in order to make a leakproof metal to metal connection.

Figure 1.

### TUBING DATA FOR 37° FLARED THREE-PIECE TUBE ASSEMBLY

In order to ensure maximum fitting reliability and performance, great care should be taken when selecting the tube for each application.

Tubing should be a fully annealed, seamless and drawn, suitable for bending and flaring, according to standard ASTM-269, A.I.S.I. 316 or 304.

### QUALITY

Lengths of finished tubing should be reasonably straight and have smooth ends free from burrs. Tubing should be free from scale and injurious defects and have a workmanlike finish. Surface imperfections such as handling marks, die marks, or shallow pits will not be considered injurious defects provided the imperfections are within the tolerances specified for diameter and wall thickness. The removal of such imperfections is not required. (Quality SAE J524).

### TUBE HANDLING

Scratches on the tube might cause leaks. It is, therefore, important to handle the tube carefully to reduce the risk of leaks.

1. Tubes must not be dragged on the floor.
2. Tubes must not be dragged out of a tubing rack, especially in cases of large OD tubes.

### COPPER TUBING

If copper tubing from a roll is used, ensure, the end of the tube is held and the roll moves away with the tubing laying on a flat surface.

### TUBE CUTTING

Two different methods can be used to cut tubes:

1. Tube cutter
2. Hacksaw

### TUBE CUTTER

To attain a leakfree connection, the tubing must be cut squarely. A good quality tube cutter with the appropriate blade for the tubing material is recommended.

Do not try to reduce the time of cutting by taking deep cuts with each turn of the cutter.

The end of the tube must be deburred to avoid damage to the fitting and to ensure that the tube reaches the bottom of the fitting.

### HACKSAW CUTTING

In order to cut the tube with a hacksaw and to attain square ends, the tube must be cut with guide blocks. This method of cutting requires deburring of the tube ends.

### WARNING

Do not hold the tube in a vise in the place where it will be inserted into the fitting. The vise will leave a mark on the tube that may cause leaks and might cause ovality.

## ASSEMBLY INSTRUCTION

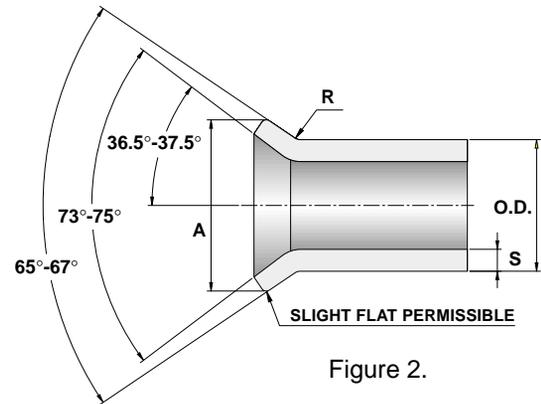

Figure 2.

Perform flaring according to SAE J533. See Fig. 2.  
 See Table 1 below for dimensions .

32	2	2-1/2" - 12	2"	1500	1000

### DEBURRING PRIOR TO FLARING

To ensure satisfactory flares are produced, it may be necessary to deburr the tube end prior to flaring. It is usually necessary to break the inside corner smoothly before single flaring, and some non-ferrous tubing to eliminate is normally required to eliminate the cutoff burr which might otherwise create leakage paths across a substantial portion of the flare. It is acceptable to smoothly break the outside corner prior to single flaring, or both outside and inside corners prior to double flaring, on any tube material to minimize splitting.

### NOTE:

Since many factors influence the pressure at which a system will or will not perform satisfactorily, values shown in table 2 should not be construed as guaranteed minimum.

## How to Order

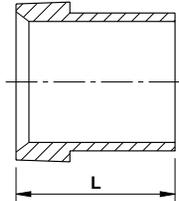

Ham-Let's 37° Flare 3 piece tube assembly fitting part numbers are constructed from symbols that identify the type of material and size of the fitting.

The part number describes a completely assembled fitting from 1/8" O.D. to 2" O.D.

### EXAMPLE

<b>748HF</b>	SS = Stainless Steel B = Brass	<b>1/4"</b> <b>6mm</b>	x	<b>1/4"</b>	BD = Body ASS = Assambled
Fitting type (male Flare 37° connector)		Tube O.D. The O.D. size is always the first to be described		1/4 NPT Pipe thread	

All 37° Flared tube fittings-3 piece tube assembly, can be used with metric tube by using a metric 37° sleeve, instead of an inch sleeve. Each dimension table shows which metric sleeve should be used for every size.

# UH LINE SERIES

FOR ULTRA VACUUM SYSTEMS

## UH LINE SERIES

### A SINGLE SOURCE WITH MAXIMUM FLEXIBILITY

- HAM LET® "UH" Series design for ultra vacuum system.
- Finger tight assembly (Nut is knurled).
- Easy removal, easy repositioning in a system.
- HAM LET® "UH" Series is helium leak tested to  $4 \times 10^{-9}$  ATM.cc/sec.
- Maximum Temperature: 242°C.
- "UH" Series is available factory assembled to various HAM-LET® Valves: Ball Valve; Needle Valve; Diaphragm Valve; Filter; Check Valve.
- Materials: All metal parts are 316 Stainless steel, O-Ring - Viton®.
- Full Range of sizes from 1/8" to 1"

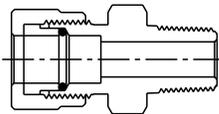

#### How to Order

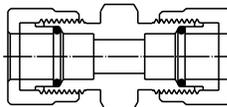

<b>768</b>	<b>UH</b>	<b>SS</b>	<b>1/4</b>	<b>X</b>	<b>1/8</b>
Fitting Type	Series Designator	Material Designator	Tube O.D		NPT
		SS=316SS B=Brass			

- \* Available bored through. Add "R" to the cat. no.
- \* Parts can be assembled and packed in a cleanroom class 100 if specified.
- \* Only items priced in HAM-LET's up-to-date price-list are standard.
- \* Price and delivery of non-stock items furnished on request.

# HTC<sup>®</sup>

HI TECH COMPONENTS

**ULTRA HIGH PURITY CONNECTORS**  
ORBITAL WELD AND METAL GASKET FACE SEAL FITTINGS

## TECHNICAL INFORMATION

HAM-LET®/HTC® specializes in the design and manufacture of high quality, specially manufactured valves and fittings for High Purity and Ultra High Purity applications. HTC's expert staff of engineers and technicians have worked together to develop a complete line that reflects the company's deep understanding of the critical requirements of the semiconductor, biotech, and pharmaceutical industries.

HAM-LET®/HTC® is a leader in the manufacture of fittings and valves for clean industries and has consistently spearheaded significant new developments in this field. For example, the company has set new standards in the production of Ultra Pure fittings by incorporating the use of 316L Vim/Var as the standard material for the manufacture of fittings. HTC has also broken new ground in surface finishing techniques by implementing improved electro-polishing processes.

### PLATING:

Female threads are silver plated to reduce the risk of galling while improving the remark ability of the fitting. This high quality plating also reduces the torque required for fitting assembly.

Lubrication: Female nuts and caps without a dry lubricant are available as an option.

**Reference Spec: Meeting and exceeding - Mil Spec: QQ-S-365.**

**Note:** Do not apply any type of cleaning acids and/or electropolishing solutions to any female threads. These solutions damage the silver plating and invalidate any expressed or implied warranty.

### WELDING:

Welding options: - butt weld  
- shoulder weld  
- socket weld

**Reference Specs: All welded products are manufactured and welded according to SEMI F3-94.**

### TESTING:

Ham-Let follows the relevant ASTM, ANSI, ASME, ISO, SEMI & SEMASPEC standards for testing and qualifying both processes and results.

### JAPANESE STANDARDS:

Ham-Let, upon request, manufactures the HTC product line to meet the various Japanese standards:

- Low Manganese Material Specifications (JIS).
- Wall thickness.
- Hardness.

HTC® Buttweld	316L	1000	538
	316LV	1000	538

### HELIUM LEAK:

All Ham-Let Face Seal products are tested and qualified to a helium leak rate of less than  $3 \times 10^{-10}$  std  $\text{cm}^3/\text{sec}$ . **Reference Spec:** SEMI F1.

### SURFACE FINISH:

**Reference Spec:** ANSI B46.1 and ISO4288

### SURFACE ANALYSIS:

SEM/EDX analysis is used to monitor surface defects per ASTM F1372 and ASTM F1375.

### MOISTURE ANALYSIS:

Based on ASTM F1397

### PARTICLE CONTRIBUTION

#### TEST:

Based on Semaspec 90120390 B.

### SURFACE CHEMISTRY:

All UHP products are Electropolished with a proprietary process for achieving and exceeding the Sematec Standards of surface cleanliness and anticorrosion requirements. Parameters are measured by SEM, AUGER, ESCA. **Reference Spec:** SEMI F19-95; E49.9-0298; SEMASPEC 91060573A-STD.

### CLEANING SPECIFICATIONS:

According to # H9800.

**Reference Spec:** SEMI E49.2-0298.

### MATERIAL TRACEABILITY:

All HTC components are Heat Coded for full traceability.

### ASSEMBLY:

According to SEMI E49.6-95

### ACCESSORIES:

Grip Kit, Plastic Bead Protector, Metal Bead Protector.

### PACKAGING:

Each "E" finished component is double bagged to insure component cleanliness and to protect it from environmental contamination. The inner bag is Nylon 6 and vacuum sealed. The outer bag is polyethylene.

**Reference Spec:** SEMI E49.1

### INTERNATIONAL CERTIFICATIONS:

ISO 9000, Certified by A.S.M.E. & S.I.I.

### HTC® Fittings Pressure Rating

Products	Material	Size	Wall Thickness	Pressure Rating	
				Psig	Bar
HTC Fittings	316L Or 316LV	1/4	0.035	5906	407
		3/8	0.035	3788	261
		1/2	0.049	3975	274
		3/4*	0.065	3488	241
		1*	0.065	2569	177

\* 3/4 & 1 inch sizes, not Standard. Manufactured per request

Pressure ratings are calculated in accordance with ANSI Code for Pressure Piping ANSI B-31, for stainless steel fittings. All working pressures are at 4:1 safety factor.

\* For "H" level the surface roughness Ra average - 10 μinch

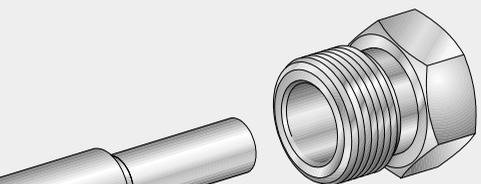

## MAKE UP OF GLANDS

- Glands offer high purity metal to metal seal, for leak free service in high vacuum or high pressure assemblies.
- The Gasket is compressed by two highly polished beads when the male and female nuts are engaged.
- The gland's bead to bead assembly compresses a soft metal gasket to seal. This assembly can be locked by Ham-Let's Grip-Kit Ⓢ.

- Visual test and leak testing is performed through two test ports in opposite locations of the female nut.

## ASSEMBLY INSTRUCTIONS:

1. All HTC face seal fittings should be protected until assembly and make up. Exercise great care that the sealing surfaces are not scratched, damaged or contaminated in any way during handling and assembly.
2. High purity fittings/applications dictate make up and assembly in clean environment utilizing proper clean room protocol.
3. Make up instructions:  
Tighten the female nut to the male nut/body finger tight.  
Tighten the female nut 1/8 turn past finger tight. Always torque the female nut while keeping the male nut/body stationary.  
Face seal connections are remarkable - please use a new gasket for each remarke.

# HAM-LET MONEL<sup>®</sup> NICKEL-COPPER ALLOY 400/R-405 CONNECTORS

© Monel is a trademark of  
Special Metals Corp.

MONEL® NICKEL-COPPER ALLOY 400/R-405 **LET-LOK TUBE FITTINGS**

**ALLOY 400/R-405 CONNECTORS**

Monel® nickel-copper alloy 400 is a solid-solution alloy that can be hardened only by cold working. It has high strength and endurance over a wide temperature range and excellent resistance to many corrosive environments. Alloy 400 is widely used in many fields, especially marine and chemical processing.
